

Special Education Center Rijeka, Croatia

Center for Education Rijeka has been working in 60 years in the field of education, rehabilitation and habilitation of students with disabilities. The organization is divided into elementary and secondary vocational schools and programs for students with combined disabilities.

In vocational school, we educate students from 14 to 19 years of age in various professions: chef, confectioner, tailor, carpenter, plumber, florist, gardener, bookbinder, waiter, painter, car painter, ... According to the education program, students also take practical classes. We have two workshops for the profession of tailor and bookbinder in the school building. Students studying in other occupations take their practical classes in the open labor market. At their place of work, they are regularly visited by a teacher in charge of their advancement in the acquisition of professional knowledge. In addition to education, students in need at school have the opportunity to participate in physiotherapy and logo therapy. After graduation, we actively help our students gain employment and independent living opportunities. In order to be as good as possible in our work, we regularly educate ourselves and strive to provide students with maximum support in their education.

We see the Erasmus + seminar as an opportunity to create partnerships with school organizations in the same or similar field of work for the purpose of sharing experience among colleagues.
